

TEJAS BALASAHEB MOHITE

CLOUD AND DEVOPS ENGINEER

Pune, Maharashtra | +91 7775987077 | tejas mohite345@gmail.com

Professional Summary

Motivated and detail-oriented Cloud and DevOps Engineer fresher with hands-on experience in AWS, Docker, Git, Jenkins, Linux, and CI/CD pipeline implementation. Skilled in automating deployments, managing cloud infrastructure, and supporting application delivery through modern DevOps practices. Familiar with Infrastructure as Code concepts, containerization, and version control. Passionate about learning emerging cloud technologies and building scalable, reliable, and efficient solutions while contributing to team success.

Experience

Cloud and DevOps Intern | Cloudblitz powered by Gremio Technologies Pvt. Ltd

Kothrud, Pune, Maharashtra

- Built and managed CI/CD pipelines using Jenkins to automate application build and deployment processes.
- Worked with AWS services for cloud-based deployment and infrastructure management.
- Containerized applications using Docker and improved deployment consistency across environments.
- Used Git and GitHub for version control, collaboration, and source code management.
- Performed Linux server configuration and basic system administration tasks.
- Gained exposure to Infrastructure as Code concepts and deployment automation practices.
- Monitored application deployment workflows and resolved pipeline execution issues.
- Implemented end-to-end CI/CD workflows integrating Git, Jenkins, Docker, and AWS.
- Deployed cloud-based applications with automated build and deployment strategies.

Technical Skills

Cloud Platforms: AWS (EC2, S3, IAM, VPC, RDS, CloudWatch, Route 53, Lambda, IAM)

DevOps Tools: Jenkins, Docker, Kubernetes, CI/CD Pipeline Automation

Infrastructure & Automation: Infrastructure as Code (Terraform – Basics), Deployment Automation, Containerization

Version Control: Git, GitHub, GitLab

Operating Systems: Linux (Ubuntu), Windows

Scripting & Languages: Shell Scripting (Bash), Python (Basics), C

Build & Deployment: Maven, Jenkins Pipeline, Docker Image Creation & Management

Monitoring & Logging: CloudWatch, Basic Monitoring & Application Deployment Tracking

Networking Concepts: TCP/IP, DNS, HTTP/HTTPS, Load Balancing, Security Groups, NACLs

Databases: MySQL, PostgreSQL (Basics), MongoDB

Tools & Platforms: AWS, VS Code

Projects Undertaken

1. Distributed Web Scraper Dashboard | Docker, Linux, Git/GitHub, AWS services

- Designed and implemented a distributed web scraping solution using Docker containers for scalable data collection.
- Automated deployment and managed containerized services to improve performance and maintainability.
- Worked with version control and deployment workflows to support efficient application delivery.

2. Hosting a Notes Web Application | AWS services, Docker

- Deployed and hosted a web application on AWS using cloud infrastructure and Docker containerization.
- Configured cloud resources and optimized application deployment for availability and scalability.
- Gained hands-on experience in cloud deployment and container-based application management.

3. 5-Tier Voting Application Deployment | Git/Github, Docker, Python (Flask), PostgreSQL

- Built and deployed a three-tier application architecture across AWS and Kubernetes environments.
- Configured application, database, and presentation layers for scalable infrastructure management.
- Implemented deployment and orchestration practices to improve reliability and resource utilization.

Education

Bachelor of Engineering (B.E.) · Computer Engineering

Yadavrao Tasgaonkar College of Engineering and Management

2023-2026
